

Advances in Ecological Research Volume 41

Complete list of Contents

Preface

Allometry of Body Size and Abundance in 166 Food Webs

Human and Environmental Factors Influence Soil Faunal
Abundance–Mass Allometry and Structure

Modeling Individual Animal Histories with Multistate
Capture–Recapture Models

Sustained Research on Stream Communities: A Model
System and The Comparative Approach

Empirical Evidence of Density-Dependence in
Populations of Large Herbivores

Cover Photo: A colorbanded Roseate Tern (*Sterna dougallii*) originally banded as a chick at Falkner Island, Connecticut, USA, slows to land on a piece of driftwood. The 13-year history of this bird was used in one of the examples of multistate capture-recapture model analyses described in the paper by Lebreton et al. (see pp. 87–173). Photo taken in 2002 by A.J. Hand, used by permission of the photographer.
