

Volume 72

Computational Methods for Genetics of Complex Traits

Serial Editors

Theodore Friedmann University of California at San Diego, School of Medicine, USA

Jay C. Dunlap Dartmouth Medical School, Hanover, NH, USA

Stephen F. Goodwin University of Oxford, Oxford, UK

The field of genetics is rapidly evolving, and new medical breakthroughs are occurring as a result of advances in knowledge gained from genetics research. **Advances in Genetics** continually publishes important, timely reviews from leaders in the field that cover a broad range of topics of interest to geneticists and their colleagues in affiliated disciplines. This volume includes articles on:

- Genome Simulation: Approaches for Synthesizing In Silico Datasets for Human Genomics
- Logistic Regression and Extensions
- Complex System Approaches to Genetic Analysis; Bayesian Approaches
- Multigenic Modeling of Complex Disease by Random Forests
- Detecting, Characterizing, and Interpreting Nonlinear Gene-Gene Interactions Using Multifactor Dimensionality Reduction
- The Restricted Partition Method
- Statistical Methods for Pathway Analysis of Genome-Wide Data for Association with Complex Genetic Traits
- Providing Context and Interpretability to Genetic Association Analysis Results Using the KGraph

Praise for **Advances in Genetics**:

"Outstanding both in variety and in the quality of its contributions."--

NATURE

"Can be highly recommended to geneticists, and biologists in general...will prove to be of high importance for the development of the science of genetics."--
