

INTERNATIONAL
REVIEW OF CELL AND
MOLECULAR BIOLOGY

Volume 287

Edited by
KWANG W. JEON

University of Tennessee, Knoxville, TN, U.S.A.

International Review of Cell and Molecular Biology presents current advances and comprehensive reviews in cell and molecular biology—both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Praise for the Series

"Should be on the shelf of any biomedical library"

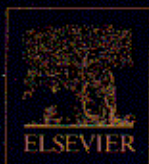

DOODY'S

"Maintains the tradition and set-up of the previous volumes and certainly provides up-to-date data on varied aspects of cell and molecular biology...a valuable acquisition to any library."

THE NUCLEUS

Contents include

- Structure and Functions of Aquaporin-4-Based Orthogonal Arrays of Particles
- Interpreting the Stress Response of Early Mammalian Embryos and Their Stem Cells
- Directional Cell Migration: Regulation by Small G Proteins, Nectin-like Molecule-5, and Afadin
- Mitochondrial RNA Import: From Diversity of Natural Mechanisms to Potential Applications
- New Insights into Vinculin Function and Regulation
- Nuclear Pore Complex: Biochemistry and Biophysics of Nucleocytoplasmic Transport in Health and Disease
- Dynamic Microtubules and the Texture of Plant Cell Walls
