

# ADVANCES IN MICROBIAL PHYSIOLOGY

## ADVANCES IN BACTERIAL RESPIRATORY PHYSIOLOGY

EDITED BY ROBERT K. POOLE

### C O N T E N T S

**Signal Correlations in Ecological Niches can Shape the Organization and Evolution of Bacterial Gene Regulatory Networks**

*Yann S. Dufour and Timothy J. Donohue*

***Vibrio Fischeri* Metabolism: Symbiosis and Beyond**

*Anne K. Dunn*

**Environmental Heme Utilization by Heme-Auxotrophic Bacteria**

*Alexandra Gruss, Elise Borezée-Durant and Delphine Lechardeur*

**The Hyperthermophilic Bacterium *Aquifex Aeolicus*: From Respiratory Pathways to Extremely Resistant Enzymes and Biotechnological Applications**

*Marianne Guiral, Laurence Prunetti, Clément Aussignargues, Alexandre Ciaccafava, Pascale Infossi, Marianne Ilbert, Elisabeth Lojou and Marie-Thérèse Giudici-Orticoni*

**Regulation of the Anaerobic Metabolism in *Bacillus Subtilis***

*Elisabeth Härtig and Dieter Jahn*

**Supramolecular Organization in Prokaryotic Respiratory Systems**

*Axel Magalon, Rodrigo Arias-Cartin and Anne Walburger*

**Sulfate-Reducing Bacteria Reveal a New Branch of Tetrapyrrole Metabolism**

*Susana A.L. Lobo, Martin J. Warren and Lígia M. Saraiva*

*Cover illustration:*

Figure 2 from Chapter 2 by Anne Dunn. The light organ that houses *Vibrio fischeri* consists of transparent tissue located on the ventral side of the animal. A. Light microscopy image of the ventral side of a juvenile squid. The arrow points to the location of the light organ. Scale bar represents ~1  $\mu$ M. B. Higher magnification of the light organ region. Scale bar represents ~10  $\mu$ M. C. Same image as B, highlighting the location of the transparent light organ. Image was modified from J. Bacteriol. 2008, Vol. 190: 5814-5823. Copyright ©, American Society for Microbiology
