

'Fantastic. Easy to understand, interactive, biologically relevant and dictated in a way that seemed as though you are almost having a conversation with the author.'

James Sleight, Student, University of Oxford

'Coherent and clear. The best I have seen this kind of material treated.'

Stephen Hubbard, University of Dundee

Biological systems are often best explored and explained using the power of maths—from the rate at which enzymes catalyse essential life processes, to the way populations ebb and flow as predators and prey interact. Mathematical tools lie at the heart of understanding biological systems—and mathematical skills are essential for success as a bioscientist.

Core Maths for the Biosciences is the ideal course companion as you master the mathematical skills you need to complete your undergraduate studies and will remain a valuable resource at professional and research level. Starting from fundamental concepts of arithmetic and algebra, the book blends clear explanations and biological examples throughout as it takes you towards some of the most sophisticated yet elegant mathematical tools in use by biologists today: differential equations, dynamical systems, and chaos theory.

Reflecting the use of maths in modern biology, the book shows how computational approaches are applied to probe biological questions, and makes extensive use of computer support to help you develop intuitive mathematical skills—both through graph-plotting software, and interactive Excel® workbooks for many chapters.

- Covers the wide range of mathematical concepts to which you might be exposed during the course of a bioscience degree, in a self-contained and consistent presentation.
- Emphasizes the power of computation in solving mathematical problems, reflecting how mathematical tools are applied in biology today.
- Three case studies appear in instalments throughout the text, to place the theory in a biological context: Models of Population Growth, Models of Cancer, and Predator-Prey Relationships.
- Extensive free online support, including a suite of interactive Excel® spreadsheets, encourages hands-on learning, helping you to master even the most challenging concepts.

online resource centre

www.oxfordtextbooks.co.uk/orc/reed/

The **Online Resource Centre** to accompany *Core Maths for the Biosciences* features:

For registered adopters of the book:

- Figures from the book in electronic format
- Solutions to all end-of-chapter exercises

For students:

- Solutions to half of the end-of-chapter exercises
- Access to FNGraph, the graph-plotting software featured in the book
- An extensive range of interactive Excel® workbooks, to help you master the concepts presented in the book through hands-on learning
- Links to useful learning resources on other web sites
