

Third Edition

PRACTICING BIOLOGY

A STUDENT WORKBOOK

by Jean Heitz and Cynthia Giffen

This workbook focuses on key ideas, principles, and concepts that are fundamental to understanding biology. A variety of hands-on activities, such as mapping and modeling, suit different learning styles and help you and your fellow students discover which topics you do not fully understand, and then modify any misconceptions that you may have.

Activities to promote active learning:

Leading Questions. Work through a series of leading questions designed to build basic understanding of principles. Additional questions will give you an opportunity to apply what you are learning in your biology course to new situations.

Process of Science. Practice using scientific thought processes to solve problems, propose experiments, predict possible outcomes, and interpret data.

Concept Mapping and Drawing. Learn to develop concept maps, flow diagrams, and drawings designed to help you organize information and ideas.

Modeling. Build models of dynamic biological processes that occur at the molecular, cellular, and physiological level.

Additional learning tools for success in your biology course:

Student Study Guide for BIOLOGY, Eighth Edition
(978-0-321-50156-1 / 0-321-50156-X)

This printed learning aid provides a concept map of each chapter, chapter summaries, word roots, chapter tests, and a variety of interactive questions including multiple-choice, short-answer essay, labeling art, and graph-interpretation questions.

MasteringBiology™ • www.masteringbio.com

MasteringBiology offers new in-depth Tutorials on biology's toughest topics. These tutorials provide hints and feedback specific to each student's misconceptions. The Study Area contains the new BioFlix 3-D animations and tutorials plus hundreds of additional interactive activities, investigations, Discovery Channel Videos, MP3 Tutors, a customizable eBook, quizzes, and more.
