

"A book that takes a good hard look at barnyard sex. Zuk is a truly intelligent writer who is out to make a serious point: Humans often try to legitimize their own behavior by citing similar behavior in the animal kingdom. These 'popular notions,' she explains, often go unchallenged by scientists who know better and are trumpeted by journalists who think they're on to something but aren't. Ms. Zuk's talent for identifying the self-serving use of animal stereotypes is not only rare but relevant."

Wall Street Journal

"[A] witty and provocative survey of sex in the animal kingdom."

Discover Magazine

"Fascinating and persuasive. Zuk is not an ideologue, just an unusually clear-eyed scholar. No doubt some readers will resist her efforts to claim scientific dispassion for feminism. But few will dispute her modest and sensible conclusion: for those open-minded enough, 'nature does not provide object lessons so much as challenges to our assumptions.'"

New York Times Book Review

"A sharp, fascinating, and often hilarious account of both the sex life of animals and our own attitudes to the beast with two backs. Zuk never flinches from the darker side of nature as she describes infanticide, murder, enforced sex, or deception. But mostly what she reveals is the charming, fascinating, and downright funny things that animals get up to."

The Guardian Review (UK)

Marlene Zuk is Professor of Biology at the University of California, Riverside, and the coeditor, with J. E. Loye, of *Bird-Parasite Interactions: Ecology, Evolution, and Behaviour* (1991).
