

"Darwin's Universe is the single best volume ever published that covers all matters Darwin from A to Z. I have never so enjoyed a scientific book, plucking out gems of elegant narrative richly supported by photographs and paintings from the history of evolutionary thought."

Michael Shermer, author of *In Darwin's Shadow* and *Why Darwin Matters*

"This is no staid, humorless encyclopedia of natural history and evolution; rather, it is a joyous romp through a world inhabited by as eccentric and absorbing a cast of characters as was ever brought together between endpapers."

From the Foreword by Ian Tattersall, author of *The Fossil Trail* and *Becoming Human*

PRAISE FOR RICHARD MILNER'S ENCYCLOPEDIA OF EVOLUTION:

"Pick up this book and be gripped, but do not lean against a wall. Find a chair. You will need it."

New Scientist

"Tackles aspects of evolution from the scholarly to the popular, the well known to the obscure, prehistory to current events. . . . Exciting and fun from cover to cover."

Choice, "Best Reference Book of the Year"
