

Mabberley's *Plant-book* is internationally accepted as an essential reference text for anyone studying, growing, or writing about plants. In over 24,000 entries, this comprehensive dictionary provides information on every family and genus of seed-bearing plant (including gymnosperms), as well as ferns and clubmosses. The book combines taxonomic details and uses with English and other vernacular names. In this new edition, each entry has been updated to take into consideration the most recent literature, notably the great advances from molecular analyses, and over 1650 additional new entries (including ecologically and economically important genera of mosses) have been included, ensuring that Mabberley's *Plant-book* continues to rank among the most practical and authoritative botanical texts available.

PROFESSOR DAVID MABBERLEY is Director of the University of Washington Botanic Gardens, and holds the endowed Orin and Althea Soest Chair in Horticultural Science at the University of Washington. He also holds the positions of Extraordinary Professor at the Nationaal Herbarium Nederland, University of Leiden, the Netherlands; Adjunct Professor at the University of Western Sydney, Australia; and Honorary Research Associate at the Royal Botanic Gardens in Sydney. He has received numerous awards for his work, including the Peter H. Raven Award 'for exceptional contributions to scientific outreach' (2004), and the prestigious Linnean Gold Medal for Botany (2006). This is his sixteenth book.

FROM REVIEWS OF THE SECOND EDITION

'The *Plant-book* is now widely established as a classic botanical work and an essential reference for any person, professional or amateur ... recommended as an essential and modern reference for anyone interested in botany.'

New Zealand Journal of Botany

'No one working seriously with living vascular plants should be without a copy.'

Choice

'This is first and foremost a reference for taxonomists and is a most handy and useful book for horticulturists wishing a comprehensive single volume for taxonomic inquiry. The book contains an incredible amount of information and is a credit to the perseverance and work of Dr. Mabberley.'

Allan M. Armitage, *HortScience*

'D. J. Mabberley and his wondrous *Plant-book* ... being all encompassing and indispensable, the botanical equivalent of Johnson's Dictionary.'

Tim Flannery, *The New York Review of Books*
