

“Up to date on the research and thoroughly comprehensive in coverage, Aidong Zhang’s *Protein Interaction Networks: Computational Analysis* is an invaluable contribution to our understanding and knowledge of current analytic methods for protein interaction networks. Written with technical depth and sophistication and replete with examples, this book will be both an indispensable manual for practitioners and a crucial textbook for teaching.”

– JIAWEI HAN, Professor of Computer Science,
University of Illinois at Urbana-Champaign

“This book provides a comprehensive coverage of current research issues and solutions in protein interaction networks. Within this new and exciting area of research, certain topics are explored in depth, including newest results reported by the author and other leading experts. I highly recommend this book for researchers and students who are interested in bioinformatics.”

– YI PAN, Professor and Chair of the Computer Science Department,
Georgia State University

“This book provides the most comprehensive and systematic review of an important biomedical research topic (protein interaction networks). It gives its readers an opportunity to easily learn about this challenging topic and to begin investigating how they may contribute to it. Its great value makes it suitable for a broad range of readers, from students to experienced researchers.”

– DONG XU, Professor and Chair of the Computer Science Department,
University of Missouri, Columbia

“This book is a comprehensive and excellent introduction to network biology in general and proteins networks in particular. It provides detailed description of the major computational concepts and their applications in systems biology. It is a must-have book for anyone interested in this exciting topic.”

– MOHAMMED J. ZAKI, Professor of Computer Science,
Rensselaer Polytechnic Institute
