
ANNALS OF MATHEMATICS STUDIES

Phillip A. Griffiths, John N. Mather, Elias M. Stein, Editors

Princeton University Press is proud to have published the *Annals of Mathematics Studies* since 1940. One of the oldest and most respected series in science publishing, it has included many of the most important and influential mathematical works of the twentieth century. The series continues this tradition into the twenty-first century as Princeton looks forward to publishing the major works of the new millennium.

To mark the continued success of the series, all books are again available in paperback. For a complete list of titles, please visit the Princeton University Press Web site: press.princeton.edu. The most recently published volumes include:

The Gross-Zagier Formula on Shimura Curves, Xinyi Yuan, Shou-wu Zhang, and Wei Zhang

Mumford-Tate Groups and Domains: Their Geometry and Arithmetic, Mark Green, Phillip A. Griffiths & Matt Kerr

The Decomposition of Global Conformal Invariants, Spyros Alexakis

Some Problems of Unlikely Intersections in Arithmetic and Geometry, Umberto Zannier

Convolution and Equidistribution: Sato-Tate Theorems for Finite-Field Mellin Transforms, Nicholas M. Katz

Fréchet Differentiability of Lipschitz Functions and Porous Sets in Banach Spaces, Joram Lindenstrauss, David Preiss, and Jaroslav Tišer

The Ambient Metric, Charles Fefferman and C. Robin Graham

Hypoelliptic Laplacian and Orbital Integrals, Jean-Michel Bismut

Computational Aspects of Modular Forms and Galois Representations: How One Can Compute in Polynomial Time the Value of Ramanujan's Tau at a Prime, edited by Bas Edixhoven & Jean-Marc Couveignes

Weyl Group Multiple Dirichlet Series: Type A Combinatorial Theory,
by Ben Brubaker, Daniel Bump, and Solomon Friedberg

Introduction to Ramsey Spaces, by Stevo Todorćević
