

A genetics text written with YOU in mind...

"...students love this book. They find it easy to understand, find the figures useful and like the Concept Summary sections."

—Margaret Kovach, University of Tennessee, Chattanooga

"The end-of-the-chapter problems are great and they give students a broad range of difficulty to test their understanding...students...also find the worked problems extremely helpful when they get stuck on an assigned problem."

—Christopher Korey, College of Charleston

How will Pierce *Genetics* help YOU excel in your course?

- It will help you see the important connections between fundamental topics, so you can keep the big picture in focus as you learn the details
- It will provide advice, helpful hints, and encouragement at difficult places in the course
- Its careful, patient explanations and problem-solving guidance will help you master the basics, not simply memorize the facts
- It will bring genetics to life by describing the people, places, cornerstone experiments, and ethical issues that are on the cutting edge of genetics

What additional study help can *Genetics* give YOU?

- **The Time Saver Series: Genetics in Motion**

These animated tutorials, a collection of interactive online activities, will help you work through key difficult concepts from the text—so you can score better on your exams and in your course. Available **free of charge** on the text Web site, www.whfreeman.com/pierce, along with additional study aids.

- **Solutions and Problem-Solving MegaManual**

Jung H. Choi of Georgia Institute of Technology and Mark McCallum of Pfeiffer University

The complete worked-out solutions to all of the textbook problems. The MegaManual also includes **Interactive Genetics CD-ROM** (Lianna Johnson, John Merriam, University of California, Los Angeles) and **The New Genetics: Mining Genomes** bioinformatics Web tutorials (Mark S. Wilson of Humboldt State University). ISBN 0-7167-6836-4.
