

CAMBRIDGE LIBRARY COLLECTION

Books of enduring scholarly value

Under the terms of the will of the Oxford scholar Francis Henry, Earl of Bridgewater (1756-1829), Fellow of the Royal Society, absentee rector and keen manuscript-collector, a series of books was commissioned, designed to contribute to an understanding of the world as created by God. In 1834 Peter Roget, who was at the time compiling his celebrated *Thesaurus*, contributed two volumes to that controversial series, of which this is the first. He described in a manner designed to appeal to a wide audience the variety and complexity of the plant and animal kingdoms. This volume focuses on mechanical processes, and particular attention is given to those areas where animal life reveals something about human life and the man-made world, emphasising the magnificence of the all-encompassing creative process behind it. The plant kingdom is examined with the goal of establishing the mechanics behind the beauty of plant life as created by God.
