

Advance Praise for *Human Ecology*

"In *Human Ecology*, Fritz Steiner has proposed a set of principles that should be considered by both designers and ecologists. His cultured and thoroughly engaging narrative weaves these principles into a rich cloth of personal stories and popular culture, juxtaposed with academic theories from the scholarly canons of design, ecology, sociology and planning. I recommend this book as essential reading for those who dare to seek fresh perspectives on the many relationships between humans and their environments."

—KRISTINA HILL, Ph.D., an ecological urban designer and
co-editor of *Ecology and Design*

"Frederick Steiner makes ecology very human, pure and simple. Through each building block chapter, which reads like an evocative personal journey through the contemporary world scene, he weaves a regional cross-cultural 'humanitas' back into the sometimes antiseptic field of human ecology. We need Steiner and, although she never complains, so does Nature."
