

Both normal and diseased cells undergo apoptosis or programmed cell death. Thus, understanding how apoptosis behaves in health and disease is a key step in the advancement of biomedical sciences. This book **Apoptosis** is designed to impart important information on programmed cell death, be multidisciplinary and cover all scientific levels.

Contributors of this book are all either international or national experts, leading authorities or are carrying out ground breaking and innovative work on their subject. The book is essential reading for research scientists, pathologists, molecular biologists, biochemists or cellular biologists, clinicians, health care professionals, general practitioners as well as those interested in disease in general.

Apoptosis is part of the **Modern Insights into Disease from Molecules to Man** series.
