

Advanced Bioorganic Chemistry

Contents:

Introduction: Phases of Matter • Carbon-based Life • Molecular Evolution • Hypothetical Types of Biochemistry • Other Types of Speculations • Organic Compound • Classification of Organic Compounds • Biosynthetic Pathways • Enzyme Catalysis • Catabolism • Metabolism • Cofactor • Metabolic Pathway

Chemistry of Carbohydrate and Proteins: Chemistry of Carbohydrate • Aldoses • Ketoses • Monosaccharide Derivatives • Carbohydrate Synthesis • Glycosidic Bond Formation • Current Methods in Glycoside Synthesis • Fischer Glycosidation • Koenigs–Knorr Reaction • Protecting Groups • Oligosaccharides • Carbohydrate-mediated Cell Adhesion • Molecular Recognition and Catalysis • Supramolecular Metalloproteins • Metalloproteins • Iron-sulfur Protein • Structural Motifs • Signal-transduction Metalloproteins • Cytochrome P-450 • Molecular Binding of Metal Complexes by Macrocycles • Coordination Complex • Molecule • Molecular Recognition • Crown Ether • Crown Ethers in Nature • Acyclic Diterpenoids • Terpenoid • Biosynthesis

Molecular Devices: Deoxyribonucleic Acid • Properties • Base Pairing • Sense and Antisense • Supercoiling • Alternate DNA Structures • Quadruplex Structures • Chemical Modifications • Biological Functions • DNA Replication • DNA Polymerase • DNA Replication within the Cell • Dynamics at the Replication Fork • Polymerase Chain Reaction • DNA-modifying Enzymes • Topoisomerases and Helicases • Genetic Recombination • DNA Microarray • Significance Analysis of Microarrays • Cell Signalling and Gene Transcription • Unicellular and Multicellular Organism Cell Signalling • Classification of Intercellular Communication • Gene Transcription • Major Steps • Transcription Factories • Designing Designs for Research • Minimizing Threats to Validity • Advances in Quasi-Experimentation • The Advantages of Multiple Perspectives • Evolution of the Concept of Validity • Development of Increasingly Complex Realistic Analytic Models...

About the Editor

Pedro Sanchez did his Ph.D. in 2002 and Postdoctoral Fellow in 2002-2004. He is chief researcher in American Research Center. His research program is focused on the synthesis and characterization of novel polymeric and composite materials, with an emphasis on the control of nanoscale structure. Recent developments in polymer and colloid chemistry offer the synthetic chemist a wide range of tools to prepare well-defined, highly functional building blocks.
