

The second edition of the perfect companion for practical course work in enzymology. Now with an improved selection of enzymatic assays based on key metabolic reactions, this book provides the detailed background to the enzymatic reaction and the enzyme per se. Particular emphasis is placed on troubleshooting with the described methods, and, in addition, the new four-color layout throughout features detailed protocols highlighted for easy recognition.

All the illustrations in the book are also provided as animations on the dedicated website at www.wiley-vch.de/home/enzymology. These are ideal for integrating in presentations, as is the supplementary material.

Hans Bisswanger has been Associate Professor for Enzymology at the Interfaculty Institute for Biochemistry at the University of Tübingen since 1989. He developed and leads an intensive course on enzyme kinetics, enzyme technology and ligand binding, while his main focus of research is on structural and regulatory mechanisms of multi-enzyme complexes and temperature-stable enzyme complexes. Currently, Professor Bisswanger is working on the gentle immobilization of enzyme activities on synthetic surfaces, a method that can favorably be applied for the restoration of damaged documents.
