

Written by a truly global team of researchers from Europe, Asia and the Americas with strong ties to agricultural research centers and the agrochemical industry, this ready reference and handbook focuses on the role of nitric oxide signaling in plant defense systems against pathogens, parasites and environmental stress response.

This is one of the first titles to provide a comprehensive overview of the physiological role of this ubiquitous signaling molecule in higher plants, making it an indispensable resource not only for academic institutions but also for those working in the agrochemical industry.

Shamsul Hayat is Associate Professor in the Department of Botany, Aligarh Muslim University, Aligarh, India, where he received his PhD in botany. Before joining the Department, he worked as a Research Associate in a project and as a young scientist in the Department of Science & Technology, Government of India. He has been honored with the Prof. Hira Lal Chakravorty Award by the Indian Science Congress Association, Kolkata, India, the Associate of National Academy of Agricultural Sciences, New Delhi, India and a BOYSCAST fellowship by the Government of India, New Delhi. Shamsul Hayat has published more than sixty research papers in journals and also edited five books. His major areas of research are phytohormones and heavy metal stress in plants.

Masaki Mori is Senior Researcher in the Plant Disease Resistance Research Unit, Division of Plant Sciences, National Institute of Agrobiological Sciences, Tsukuba, Japan. He received his PhD degree in agriculture from Tokyo University, Tokyo, Japan. He has also worked at the Kyushu National Agricultural Experiment Station, Kumamoto, Japan and at Rockefeller University, New York, USA. Masaki Mori has published a number of research papers on bacteriology, virology, plant hormone and plant disease resistance. His major areas of research are disease resistant mechanisms and brassinosteroid signaling in rice.

John Pichtel is Professor of Natural Resources and Environmental Management at Ball State University in Muncie, Indiana, where he has been on the faculty since 1987. He received his PhD in environmental science from Ohio State University, and is a member of the Institute of Hazardous Materials Managers, Sigma Xi Scientific Society, the American Society of Agronomy, and the Indiana Academy of Science. He was selected as a Fulbright Scholar in 1999 and again in 2005. John Pichtel has been the author or editor of four books, and has authored or co-authored approximately 35 research articles. His primary research and professional activities have been in the management of hazardous and municipal wastes, remediation of contaminated sites, reclamation of mined lands, and environmental chemistry.

Aqil Ahmad is Professor in the Department of Botany, Aligarh Muslim University, Aligarh, India, where he gained his PhD in 1975. He worked as a post-doctorate research fellow at the Danish International Development Agency in Plant Physiology at the Royal Veterinary and Agricultural University, Denmark, and has been the Principal Investigator in various projects sanctioned by different agencies. Aqil Ahmad has published about 70 research papers and edited two books, and his current research areas include phytohormones and heavy metal stress.
