Michael Wink studied biology and chemistry in Bonn at the Rheinische Friedrich University and was awarded his doctorate from TU Braunschweig in 1980. After gaining his lecturing qualification in 1984/1985, he was awarded a Heisenberg grant by the German Research Council to work at the Max Planck Institute for Breeding Research in Cologne and from then at the Gene Center of the Ludwig Maximilian University in Munich. Following the position as Chair for Pharmaceutical Biology at Mainz University in 1988, he accepted the post of Professor for Pharmaceutical Biology at Heidelberg University one year later. Between 2002 and 2004 he was the founding and managing director of the Institute for Pharmacy and Molecular Biotechnology, and dean from 2001 to 2005 for the new and popular course (BSc, MSc) in molecular biotechnology offered by the university. Professor Wink's areas of interest include pharmaceutical research, molecular biotechnology, and medicinal plants, as well as research into secondary metabolites and evolution.

Molecular biotechnology continues to triumph, as this textbook testifies – edited by one of the academic pioneers in the field and written by experienced professionals. This updated, second edition covers the entire spectrum, from the fundamentals of molecular and cell biology, via an overview of standard methods and technologies, the application of the various „omics“, and the development of novel drug targets, right up to the significance of system biology in biotechnology. The whole is rounded off by an introduction to industrial biotechnology as well as chapters on company foundation, patent law and marketing.

The new edition features:

- Large format and in color
- Clear-cut structure according to basics, methods, main topics and economic perspectives
- New sections on system biology, RNA interference, microscopic techniques, high throughput sequencing, laser applications, biocatalysis, current biomedical applications and drug approval
- Optimized teaching with learning targets, a glossary containing around 800 entries, over 500 important abbreviations and further reading.

The only resource for those who are seriously interested in the topic.
